Pre-Lab Questions

1. A concentration gradient affects the direction that solutes diffuse. Describe how molecules move with respect to concentration.

   Diffusion of solutions typically moves from areas of high concentration to areas of low concentration.

2. How does the size of a solute affect the rate of diffusion? Consider the size and shape of a molecule in your response.

   Solute size and diffusion rate are inversely proportional, therefore the bigger a solute molecule is, the slower it diffuses.

3. Does polarity affect the rate of diffusion? Explain your answer using scientific principles.

   Polarity has little effect on the diffusion rate of molecules. Polar molecules do not fuse well though the lipid core of the phospholipid bilayer of the plasma membrane. Nonpolar molecules diffuse much easier. Different types of molecules require different types of diffusion.
